

Mick Roncken Game Projects

One current project under NDA not mentioned

Red Shift (2018)

The space lizard necromancy game

My contributions:

- Conceptualization and design was a team effort.
- Project management, delivering on time to very good reviews from teachers and peers.
- Designed and implemented all Unity particle systems for projectiles and AOE effects.

Play in browser: <https://erikhogberg.itch.io/red-shift-by-team-zombie-lizard>

Fire Tires (2019)

Gotland Game Conference Alt Ctrl Finalist

My contributions:

- Initial conceptualization with the team: Alternative controls made us think of taboo items one normally doesn't get to interact with. So wheelchair and fire extinguisher.
- Optimizing and implementing all 3d assets into unity blueprints with a MagicaVoxel → 3rd party voxel optimizer → Unity pipeline
- Drawing, designing and implementing all particle systems
- Project Management
- Came up with the physical system to detect wheelchair wheel rotation as input using trackball-axis

Play in browser: <https://erikhogberg.itch.io/fire-tires-by-team-zombie-lizard>

The Prophecy (2022)

Experimental text based narrative game to research the player's experience with prophecies (two version: with and without prophecy) (playable in browser)

My contributions:

- The whole overarching narrative
- Scene writing
- All voice acting

Play in browser: <https://mcroncken.itch.io/orions-adventure-p>

The Village reminded him of the ghost towns he played in his video games. "Maybe a zombie will pop out any second", he chuckled at himself. But on a serious note the village looked really run down. Burnt houses, dead bodies strewn across different places, animals looking gaunt, malnourished not to account for the dead ones everywhere.

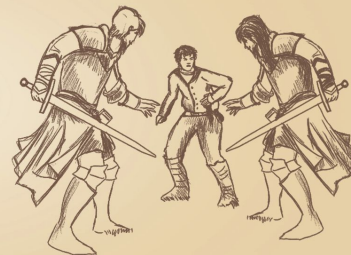

"Ok this is a nightmare, I must have laid the bed the wrong way right, what is going on here?" Orion's thoughts were doing flips. "I need to calm down, I need answers". Orion thought to himself and he needs them right now!

Thinking more about the witch and everything he has encountered in the village so far, he wonders: "Would putting an end to her help the villagers and also get me home? Who knows? I should try to talk to her first, right? Seems like there is more than meets the eye! Maybe she's just being a witch and doing what witches do, right?"

His thoughts all tripping over themselves in his head, he doesn't realize he had made it into a situation of a man getting robbed by Bandits.

Untitled Wolfgame (2023)

Randomly generated narrative card game
played through a game master.

My contributions:

- System design: rules for how and when players draw which cards and what said cards mean for the progression.
- Writing my part of the story cards.

Rules/Sequence:					
- First read the introduction.					
- Pick randomly from pre-climax events adding/subtracting tension (which starts at 0 and can't go below 0) and credibility (which starts at 2 and can't go above 2) according to the 'Choices' column.					
- For each card: read the 'full event' then pick a choice from 'choices' where applicable, then read the 'effect' of the chosen choice and/or add the deferred effect to its designated pool.					
- Don't pick cards that subtract enough credibility as to where it lowers to below 0.					
- When tension reaches 25 or more, move on to the pre-climax.					
- When the pre-climax is exhausted, move on to climax.					
- When the climax is exhausted, move on to post-climax.					
- When picking a card with a deferred effect, place said effect (but not the initial 'full event') in the pool of cards indicated by the '>>>' at the top.					
Author	Position	Event Type	Event Summary	Full Event	Choices
Micaela	Introduction			A long, long time ago, in a time before ours, a great drought had made it hard for the wildlife to survive and prosper. The drought would be followed by one of the harshest winters in remembrance. In this story, you are the Alpha male of a wolf pack. It's your job to lead your pack through this dark and oppressive season. On the other side of the woods, a village of humans have been hunting ferociously, yet another reason why there is less prey than before. Your pack consists of: Rain - is your youngest living cub. He was born less than four seasons ago, because he is your son, his rank is pretty high. Still, he has a lot to learn. Louis - a knowledgeable elder, and your mate. Louis has had her heart had been broken over and over again, as she has witnessed several pups mature to adults, only to die before their time, which has left her cold and distant. Luna - is an excellent and resourceful hunter. Impulsive, but fiercely loyal to you. She was adopted into your pack when she was banished from her old one. Zion - a small and quiet wolf. He had a hard time integrating into the pack since he was considered weak. Since then he has become a rather calming presence to the others. Skulk - Skulk would probably have preferred to be a lone-wolf if it wasn't for the fact that times are so hard that it's more efficient to hunt in a group. Because of his slyness, he is generally disliked by the rest of the pack. Then there is you of course, and what kind of leader you will be is up for you to decide. It's time to enter the woods.	
Mick	Pre-climax	Travel	The pack travels through a pine forest	The pack moves ever onward, looking for food. Their route brings them through a forest. The evergreens have not lost their colour, even though the icy cold winter has coated many of their branches and crowns in a layer of frost. The frozen ground creaks beneath your paws but besides the sounds of your pack, no other signs of life are to be seen.	Continue Dramatic Tension +0 Credibility cost: +1
Mick	Pre-climax	Scene-Setting	Describing the mountainous terrain around the pack	No matter where the pack goes, peaks tower around you. After each valley, you dread the next climb. There seems to be no end in sight.	Continue Dramatic Tension +1 Credibility cost: +1
				Today, Skulk has started to walk in front un ahead, normally you would be

Edenborn (2025)

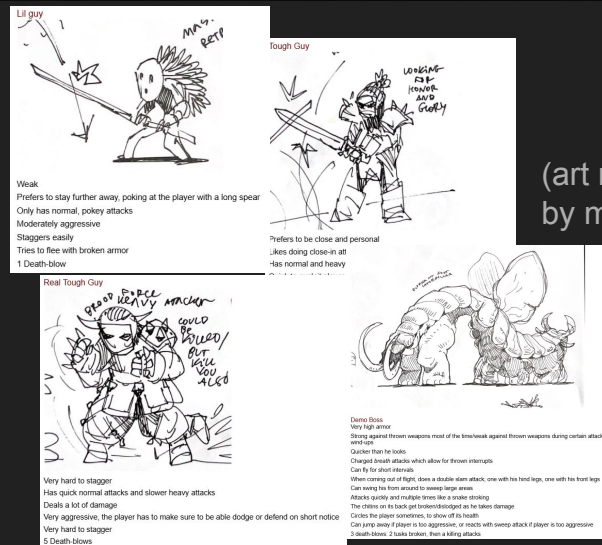

Very experimental, short Soulslike game project over the summer of 2025.

My contributions:

- Project/Team Management. By the end I was managing a team of ~12 people physically in an office.
- Leading Design discussions
- Concepting a new 'flavor' of soulslike combat designed around breakable and throwable weapons.
- Writing Design Documentation
- Early Narrative concepts (a narrative around the garden of eden and the original sin)

Ultimately decided to cancel this after our lead artist had to leave the project to make it into a learning experience rather than a time sink.

Skogsvakt (Ongoing)

Currently in-development co-op horror game.

My contributions:

- Level Design
 - One big world map, designed for map and car based navigation and affording blocked roads for replayability
- Design documentation (available upon request)
- Some 3D modeling
- Importing/managing assets in Unity

SKOGSVAKT

My two Game Design Theses

Bachelor Thesis: Accessibility for Hearing Impaired Players in Overwatch (2021)

- Community analysis
- Accessibility research

<https://uu.diva-portal.org/smash/get/diva2:1608180/FULLTEXT01.pdf>

Master Thesis: How players interact with sustainability in ECO (2023)

- Pedagogics of Game Design
- Gameplay Analysis
- Immersion research
